FINAL YEAR PROJECT PROPOSAL

Project Title : Web-Based Final Year Project Management System

Course Code : _____

Session : 2022-2026

Sr. No.	Student Name	Roll No.	Email
1	M Moeed Raza	3522	moeedraza935@gmail.com
2	Hammad Mehboob	3518	hammadkhanshahani@gmail.com

Supervisor : Mr. Ali Raza

Designation : _____

Department : Software Engineering

Date of Submission : _____

1. INTRODUCTION

1.1 Background of the Project

In higher education institutions, the final year project plays a crucial role in evaluating a student's technical knowledge, problem-solving skills, and practical implementation ability. Managing these projects manually has become increasingly difficult due to the growing number of students and complexity of project requirements.

Traditional systems rely heavily on paperwork, emails, and manual tracking methods, which are inefficient and error-prone. To overcome these challenges, a **Web-Based Final Year Project Management System** is proposed to digitize and automate the entire project management process.

1.2 Purpose of the Project

The main purpose of this project is to design and develop a web-based application that efficiently manages all activities related to final year projects, including registration, guide allocation, project monitoring, submission, and evaluation.

1.3 Importance of the System

This system ensures:

- Better coordination between students and faculty
- Transparency in project approval and evaluation
- Secure and centralized data storage
- Time-saving and reduced manual effort

2. PROPOSED SYSTEM

2.1 Overview of the Proposed System

The proposed system is a centralized online platform where students, guides, and administrators can interact and manage final year projects in an organized manner.

2.2 Features of the Proposed System

- Online project registration
- Automated guide allocation
- Project progress monitoring
- Online document submission
- Feedback and evaluation system
- Secure login and role-based access

2.3 Benefits of the Proposed System

- Reduces paperwork
- Improves efficiency
- Enhances communication
- Provides real-time updates
- Ensures data security

3. OBJECTIVES OF THE PROJECT

3.1 Primary Objectives

- To develop a web-based system for managing final year projects
- To automate project submission and approval
- To simplify guide allocation

3.2 Secondary Objectives

- To improve communication between students and guides
- To track project milestones
- To provide a transparent evaluation system

4. SCOPE OF THE PROJECT

4.1 Functional Scope

- User registration and authentication
- Project proposal submission
- Guide approval and feedback
- Project evaluation and grading

4.2 Operational Scope

- Used by colleges and universities
- Accessible via web browsers
- Supports multiple users simultaneously

4.3 Limitations of Scope

- Requires internet connectivity
- Limited to academic project management

5. SYSTEM USERS AND ROLES

5.1 Administrator

The administrator manages the overall system.

Responsibilities:

- Manage users
- Assign guides
- Monitor project progress
- Generate reports

5.2 Student

Students submit and manage their final year projects.

Responsibilities:

- Register and login
- Submit project topics
- Upload documents
- View feedback and grades

5.3 Guide / Faculty

Guides supervise and evaluate projects.

Responsibilities:

- Approve project topics
- Review submissions
- Provide feedback
- Evaluate projects

6. FUNCTIONAL REQUIREMENTS

6.1 User Authentication

- Secure login system
- Role-based access control

6.2 Project Management

- Project topic submission

- Guide approval
- Progress tracking

6.3 Document Management

- Upload project reports
- Download submitted files
- Version control

6.4 Evaluation System

- Online grading
- Feedback submission
- Result generation

7. NON-FUNCTIONAL REQUIREMENTS

7.1 Security Requirements

- Password encryption
- Secure database access

7.2 Performance Requirements

- Fast page loading
- Handles multiple users

7.3 Usability Requirements

- Simple and user-friendly interface

7.4 Reliability Requirements

- Data backup
- Minimal downtime

8. TECHNOLOGY STACK

8.1 Frontend Technologies

- HTML
- CSS
- JavaScript
- Bootstrap

8.2 Backend Technologies

- PHP / Python / Java
- Server-side scripting

8.3 Database Technologies

- MySQL / PostgreSQL

9. DATABASE DESIGN

9.1 Database Tables

- User Table
- Student Table
- Guide Table
- Project Table
- Submission Table
- Evaluation Table

9.2 Entity Relationships

Each table is connected using primary and foreign keys to ensure data consistency.

10. ADVANTAGES OF THE SYSTEM

- Centralized data management
- Reduced manual errors
- Improved communication
- Easy monitoring of progress
- Secure and reliable system

11. CONCLUSION

The Web-Based Final Year Project Management System provides an efficient solution to manage final year projects in academic institutions. It simplifies administrative tasks, enhances collaboration, and ensures transparency. The system is scalable, secure, and can be further enhanced with advanced technologies.

12. Supervisor's Remarks

Appendices (Actual/Proposed)

- Appendix A: System Diagrams (Architecture, DFD, Use Case)
- Appendix B: Interface Mockups / Screenshots
- Appendix C: Module Description Table

Appendix A: System Diagrams (Architecture, DFD, Use Case)

Figure 1: Data Flow Diagram of Final Year Project Management System"

Appendix C: Module Description Table

Module No.	Module Name	Description
1	Login & Profile	Allows users to log in to the system and manage their personal profile information. User data is stored securely in the database.
2	Project Management	Enables students to submit project ideas and check topic status. Admin can manage projects and view reports.
3	Document Handling	Allows students to upload reports and documents. Supervisors can review student work and provide feedback.
4	Evaluation System	Used by supervisors to evaluate projects, give marks, and generate grades. Students can view results and grades.
5	Admin Module	Allows the admin to manage users, projects, and overall system activities.
6	Database	Stores all system data including user details, project data, documents, feedback, and grades.
